

AZNet II – Arizona Network

CenturyLink Subcontractor Utilization

1901 Group LLC
Blacksburg Service Operations Center
2020 Kraft Dr. Suite 3020
Blacksburg, VA 24060
540-808-4561

The 1901 Group will provide engineering and design services to support the installation activity that will be part of the project technology refresh. This subcontractor will not require network access and will only work under the supervision and direction of CenturyLink personnel.

Personnel working on the project are currently based at our Skysong facility in Scottsdale, Arizona.

Integrity Network Solutions, LLC
9280 S Kyrene Rd, Suite 107
Tempe, AZ 85284
(480) 481-6600

Integrity Network Solutions (INS) is a premier provider of network consulting services specializing in the delivery of senior network engineering expertise to design, deploy, and manage advanced technology solutions. INS staff will work under the supervision and direction of CenturyLink, and will require network access and a security clearance level for public trust. This requirement will be in support of the State of Arizona service implementation and service assurance support for networking integration and security management. This will include employee Aaron Freyermuth.

- Enterprise security, voice, and data networking
- Network security vulnerability assessment, and testing

TEKsystems
3133 East Camelback Road Suite # 110
Phoenix, Arizona 85016

TEKsystems is a global company specializing in IT staffing. TekSystems staff will work under the supervision and direction of CenturyLink, and will require network access and a security clearance level for public trust. This requirement will be in support of the State of Arizona service implementation and service assurance support for networking integration and security management. This will include employees in NOC and Field Tech positions.

TelStrat® International LTD, a Texas LLP
6900 Avenue K, Plano, TX 75074

Headquartered in Plano, Texas, TelStrat was founded in 1993 as a provider of OEM products for Nortel, Cisco, and other major telecom equipment companies. It released its first TelStrat-branded call recording solution, iDVR™, in 2000. TelStrat continued to evolve and advance the product in subsequent years, adding new features, capabilities, and platform compatibilities, including Avaya, Cisco, Nortel, ShoreTel, and others.

TelStrat will not have network access and will perform auxiliary technical support functions to support peripheral equipment under the direct supervision of Centurylink and only CenturyLink employees will access the network interfaces.
